LANCOM R&S®Unified Firewalls Rack models

Network security for large, distributed enterprises and schools

Phishing, advanced persistent threats, DDoS attacks... The threat situation for companies is getting more serious every day. Especially growing, distributed enterprises with demanding networks and high data volumes need powerful security technologies. With the rack models of the next-generation firewalls (NGFW) and Unified Threat Management (UTM), you rely on a holistic security solution. With the „One-Click Security" concept of the LANCOM Management Cloud, precisely tailored security architectures are implemented in an automated, transparent, and uncomplicated manner. All LANCOM R&S®Unified Firewalls are developed in Germany and guarantee freedom from backdoors.

→ Next-generation IT security through UTM „engineered in Germany" and guaranteed freedom from backdoors for protection against spam, viruses and malware as well as cyber attacks

→ State-of-the-art security techniques such as R&S®PACE2 Deep Packet Inspection and SSL Inspection

→ Preventive security against as yet unknown threats through integrated Sandboxing and Machine Learning

→ Custom application and filter rules for increased security via Application Management and Content Filter

→ Convenient firewall management via intuitive Web interface, LANCOM Management Cloud, or LANCOM R&S®UF Command Center

→ LANCOM UF Extension Modules for port expansion and maximum flexibility available separately

→ Also available as a virtual, software-based firewall (LANCOM vFirewall)

→ Operation in a high-availability cluster (HA cluster) possible without additional costs or licenses

→ Runtime-based licensing model (1, 3, or 5 years)

LANCOM R&S®Unified Firewalls

Our security pledge: next-generation security with UTM

With threats to networks constantly growing, trusted security is anything but a given. As the keystone of network security, next-generation firewalls (NGFW) combine common security mechanisms with the latest generation technologies. In the triad of security, compliance, and usability, the top priorities are effective protection of your network and maximum prevention against threats that are not yet known – this promise applies without restriction to all LANCOM R&S®Unified Firewalls, regardless whether they are desktop or rack models. All LANCOM R&S®Unified Firewalls are developed in Germany, are guaranteed to be free of hidden access options (backdoors), and thus bear the trust mark „IT Security made in Germany".

In addition, the system blocks malicious data traffic in IPS mode and uses virtual patching to prevent known gaps and vulnerabilities from being exploited. In the event of a „false alarm", the admin can allow the corresponding data traffic.

Powerful: convincing firewall performance

Large and distributed enterprises as well as schools have particularly high demands on the data throughput of firewalls. Even in large IT infrastructures, our high-performance, future-proof rack models of the LANCOM R&S®Unified Firewalls impress with high and concentrated data volumes. The UF-1060 in particular, with its 100G interface and 10G UTM performance, offers the necessary performance to implement high-throughput security functions for branch infrastructures on the central site. For maximum connection flexibility, you can add additional ports to the Rack Unified Firewalls with optional extension modules and thus individually adapt them to your network requirements..

Concise: intuitive usability

Especially in large networks of enterprises and schools with numerous firewall rules, simple firewall management is valuable. That is why the LANCOM R&S®Unified Firewalls offer an intuitive „easy to use" operating concept that focuses on a clear, graphical representation of your settings. This not only minimizes potential sources of error, but also saves a lot of time on troubleshooting. As a result, the firewalls enable a stress-free working life in which you can concentrate fully on your business – without worrying about network security.

Clever storage and power supply redundancy

Better safe than sorry: the LANCOM R&S®Unified Firewalls UF-1060 and UF-760 protect protect your operation with storage and power supply redundancy. On the one hand, this ensures that the devices can continue to function smoothly even if one power supply unit fails. In addition, multiple storage of data ensures simple and fast recovery in the event of deletion or damage.

LANCOM R&S®Unified Firewalls

Convenient firewall management tools

Three management tools are available for central management and transparent monitoring of the LANCOM R&S®Unified Firewalls: A graphical Web interface supports you with clear dashboards for the detailed configuration of your firewalls, while the LANCOM Management Cloud manages all devices, networks, and configurations in a highly automated way for cloud-managed security. The LANCOM R&S®UF Command Center also allows centralized management of many firewalls.

Tutorial videos for firewall configuration

Despite a state-of-the-art security architecture, 99% of all security breaches are caused by misconfiguration of the devices used. To help you guard against this, our step-by-step tutorials provide you with helpful tips for setting up your LANCOM R&S®Unified Firewalls.
